

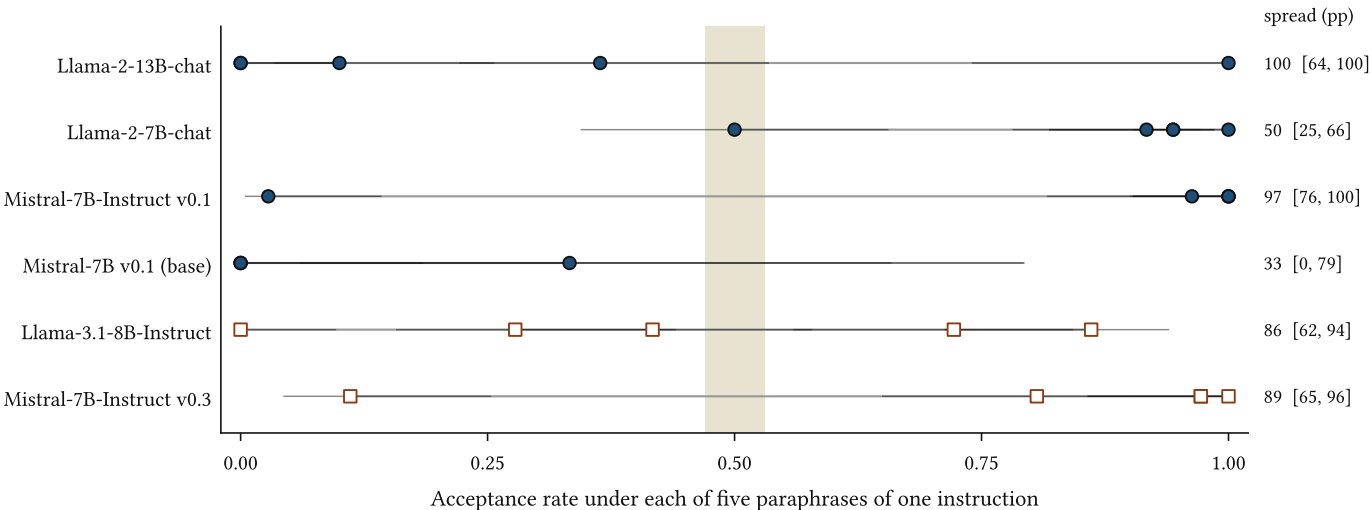

Figure 2. Rewording one instruction moves the screening decision by far more than any demographic effect reported in this literature. Each marker is one of five paraphrases, at temperature 0 with identical candidates; thin bars are Wilson 95% intervals and the grey rule spans the range. The shaded band is 3.01 pp wide, the largest demographic gap in Gao, Jiang and Yan (2026). Among models passing the quality gate the spread runs from 50 to 97 pp.
